

IMPORTANCE OF WRITING SKILLS FOR PHD-STUDENTS

Writing skills are an integral part of a person's professional culture. Thanks to computerization and scientific progress, the modern scientists are able to communicate freely, share the results of their research and professional experience with the colleagues from different countries. Writing as one of the four types of speech activity, forms the people communicative system and provides their diverse social and cultural existence. Scientific communication is generally achieved through scientific publications and conferences. Besides, articles, published in regular scientific journals carry from one research worker to another various discoveries, deductions, speculations and observations that are of common interest. Therefore, PhD students must develop their skills in writing scientific reports and articles. Writing a scientific paper and submitting it to a journal for publication is often a hard task and the biggest barriers to effective writing are poor writing skills and unfamiliarity with the requirements of scholarly writing. Researchers should know that any scientific papers have their own structure and body language. The process of writing can be a helpful tool for promoting the process of scientific thinking, and effective writing skills allow professionals to participate in broader scientific conversations. Furthermore, peer review manuscript publication systems requiring these technical writing skills can be developed and improved with practice. Having an understanding of the process and structure used to produce a peerreviewed publication will surely be resulted in a successful publication.
